

Amendments To the Abstract:

In the English translation document, please add the abstract at page 11 lines 1, as follows:

--ABSTRACT

Data for identifying users is detected by a Server, which is preferably connected to the Internet, in order to connect two users is provided. The server establishes a first signaling connection to user A and a second signaling connection, to user B by taking into account said data, whereupon the server combines the two signaling connections to a continuous signaling connection, allowing a continuous signaling connection to be established in which fees are charged by server S rather than by user A, whereby alternative options become available for charging for a traffic channel connection allocated to the continuous signaling connection.--
